

# Requirements To Download

Below are the MINIMUM requirements for a SolidWorks computer, while the bare minimum works the higher the computers stats, the smoother it is to run SolidWorks.

Min 4gb graphics card, ([Click here to see all the certified graphics cards](#))

Min 16gbs ram, (32 GB recommended)

Min 2.7ghz cpu/processor, (Anything above an i5)

These computers are expensive so they are not only meant for SolidWorks, but also everyday use and can also be used in collage as well.

If you need help finding a computer or want to find a cheaper one than is on normal vendors look for refurbished computers or message in CAD chat in discord, and someone will help you find a computer in your budget.
