

Embedding a Google Slide into a Page

This guide will show you how to embed a google slide into a wiki page rather than simply linking to it. The end result will look like [this page with our git slideshow](#).

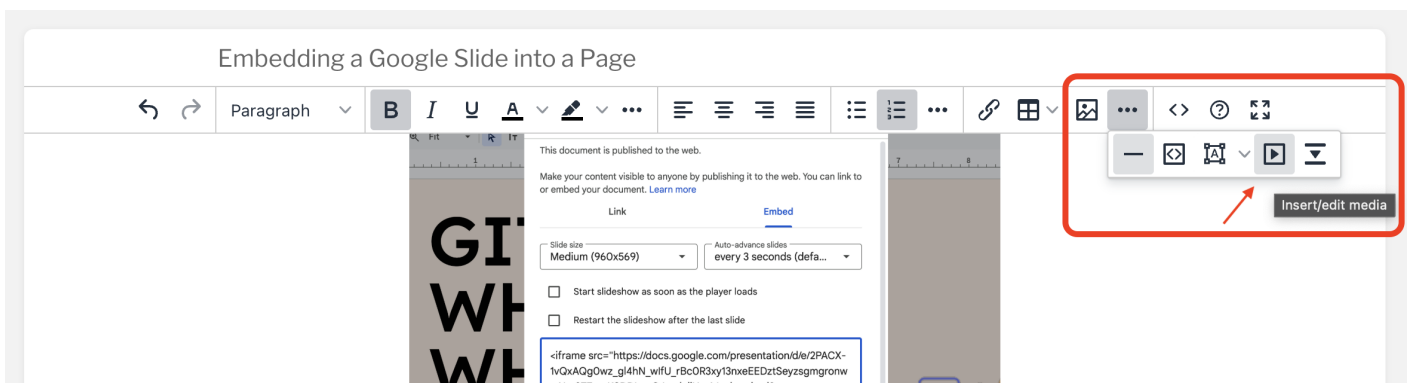

Creating the embed

1. Go to a google slide doc
2. In the File menu in the top left, go to **File>Share>Publish to Web**
3. Select the **Embed** tab
4. Configure any preferences for the slideshow as you see fit
 1. **Note:** For whatever reason, you can't make the slideshow auto-advance to the next slide slower than every minute. If you want the slideshow embed to just be static and let people flip through it as they please, you can set the `delayms` value in the code snippet to a really big number. **The value is in milliseconds.**
5. Click **Publish**

embed to a wiki page

1. **Copy the entire code snippet** in from the embed window in the previous section
2. On a wiki page, **click the three dots next to the Insert Image button** in the toolbar
3. **Click** the second button from the right, **Insert/Edit Media**

4. In the **Embed tab**, **paste the code** snippet you copied in step 1
5. Click **Save**
